WHAT EXACTLY WE WILL BE DEVELOPING?

Blog website basically deals with the written content but in this project We'll go beyond just the text, we will make an interactive and a good user interface.

SHOULD YOU START A BLOG ?

In this Project we will use many Front-end Dev tools available(I'll guide you thoroughly what, when to use what) plus we will be also DEPLOYING this website & host it LIVE.

Further, I'll it up to you that for what topic you will be dreaming to start this blog, and we'll discuss various things as soon as we begin 👍

PROJECT FOR CsoC

HOW TO DESIGN AND

DEVELOP BLOG WEBSITE

Let's make an awesome Blog, you like Blogging ?

BOOTSTRAP

B

In this first phase of our project we will be making an awesome UI for our blog website, also deciding the name of our blog

MAKING THIE WEBSITE TO HOLD BLOG DATA

The blog is of no use until it holds some user data, therefore we will be using JAVASCRIPT for learning how to hold data of our blogs.

BACK-END – NODE.JS

JS

Here comes the most important phase, developing a error-less back-end. We will use NODE as our back-end language also some frameworks of node.js.

CONNECTING TO DATABASE AND HOSTING ON WEB

As till now our Blog holds Data, now we will connect it with a Database.

• MONGO-DB

We will be using MongoDB Clusters for database connection the language will be JS for database communication with our back-end.

• HOSTING THE WEBSITE

Finally, our last step would be deploying our JS coded back-end onto servers, but for obvious reasons we can't afford large noisy CPU servers☝ Therefore we host and rent other's server(e.g. aws, GCP, Heroku, Bluehost and many more..
